

**News of Note: For immediate release July 15, 2010 at 8:00 a.m. EST Boca Raton, FL**

## **New Product: HPLS-CCS**

### **High Power Color Changing (RGB or WWW) LED Strip Fixture with patented Boca color mixing technology**

The Boca HPLS-CCS fixture is ideal for areas requiring bright, RGB-color lighting along with the convenience and reliability of a rugged, low profile fixture. It operates on 90-277 VAC, utilizes 12 ultra-bright 1W LEDs per foot and features Boca's patented technology to achieve homogenous, color saturation.

Compact (13"L x 2.596"W x 2.074"H), simple to install and designed for use with DMX512 interface, it easily integrates into and meets the demands of varied entertainment, architectural and other environments. (Additional Boca control options also available for non-DMX applications.)

While the HPLS-CCS is standard with RGB triads built in 12 inch increments (up to 96 inches), custom triad color configurations are available (on volume orders). It is UL listed and rated for dry/damp or wet locations. Choice of standard optics include clear, soft diffused, or Satin Ice: 10x20, 10x50, 10R, 24R, 36R, 60R. Standard mounting is clip-fixed, swivel-aimable.

Said David Urban, VP of Sales, "the HPLS-CCS was built to match what designers are looking for in today's color mixing linear fixtures. It's rugged and versatile, with a small profile and easy integration. The LEDs are top quality ultra-brights and we have a patented color mixing technology. There's a varied choice of optics. And our factory can customize it on volume orders. We feel it will be especially popular for wall grazing and exterior accent lighting, although with all it offers, it's really not at all limited to specific applications."

In addition to Boca Flasher's product lines, the company has an engineering team and factory with full capabilities for custom requests. For more information see specific web page:
