

News of Note: For immediate release July 15, 2010 at 8:00 a.m. EST Boca Raton, FL

New Product: R20-HO

Dimmable monochromatic 5 LED array light source

Boca's newly developed R20-HO Edison base lamp offers various advantages over most other conventional and LED small light alternatives. Simple to install, energy efficient and virtually maintenance-free, it provides 92 CRI brightness and utilizes Boca's CLean Dim technology (0-100% dimmable using conventional wall dimmers).

The array contains five 1.2W LEDs standard in red, amber, orange, green, blue, white with a choice of color temperatures – 2700, 3000, 3500, 4100, 5000, 6500K or custom (monochromatic colors). Available per specification for either 90-120VAC or 220 VAC Input voltage, it has 7W power consumption and provides long life – up to 100,000 hours (color dependent).

The R20-HO is ideal for either new installs or as a replacement lamp. This compact, highly versatile light source can be used for spot and track lighting, a wide variety of accent and decorative lighting (especially architectural and entertainment features, retail, exhibit and display) and OEM integration into products and displays. It also features a thermally optimized construction which makes it especially useful in recessed lighting or various other applications where maintaining a constant low temperature is ideal.

In addition to Boca Flasher's product lines, the company has an engineering team and factory with full capabilities for custom requests. For more information see specific web page:
